

MS Excel — Data Entry Interview Prep

Basic Commands, Formulas, Shortcuts & Common Interview Questions

1. Excel Interface Basics

Ye basic terms interview me poochhe ja sakte hain — inhe achhe se samajh lein:

Term	Matlab (Meaning)
Workbook	Poori Excel file (.xlsx) ko Workbook kehte hain
Worksheet (Sheet)	Ek Workbook ke andar multiple sheets ho sakti hain, jahan data likha jata hai
Cell	Row aur Column ke intersection ko Cell kehte hain (jaise A1, B2)
Row / Column	Row horizontal hoti hai (1,2,3...), Column vertical hoti hai (A,B,C...)
Cell Reference	Kisi cell ka address, jaise A1, B5, C10
Ribbon	Upar ka menu bar jisme Home, Insert, Formulas, Data, View tabs hote hain
Formula Bar	Jahan aap formula ya cell ka content type/edit karte hain
Active Cell	Jo cell currently select/highlighted hai

2. Basic Commands / Operations

Data Entry karna: Kisi bhi cell par click karke directly type karein, phir Enter ya Tab dabayein

Cell Format karna: Home tab > Font, Alignment, Number Format group se; ya Ctrl+1 se Format Cells dialog khulta hai

Rows/Columns Insert-Delete: Row/Column number par right-click > Insert ya Delete

Freeze Panes: View tab > Freeze Panes — headers ko scroll karte waqt fix rakhne ke liye

Sort Data: Data tab > Sort — A to Z ya Z to A, ya custom order me

Filter Data: Data tab > Filter — sirf specific data dikhane ke liye (Ctrl+Shift+L)

Find & Replace: Ctrl+F se Find, Ctrl+H se Replace — bade data me values dhoondhne/badalne ke liye

Merge Cells: Home tab > Merge & Center — multiple cells ko ek bana ke center align karta hai

Data Validation: Data tab > Data Validation — cell me sirf allowed values enter karne dena (dropdown list)

Conditional Formatting: Home tab > Conditional Formatting — condition ke hisaab se cell ka color/highlight badalna

3. Zaroori Formulas (Must-Know for Data Entry Job)

Formula	Kaam kya karta hai	Example
SUM	Numbers ka total nikalta hai	=SUM(A1:A10)
AVERAGE	Average (mean) nikalta hai	=AVERAGE(B1:B10)
COUNT	Numbers wale cells ginta hai	=COUNT(A1:A10)
COUNTA	Non-empty cells ginta hai	=COUNTA(A1:A10)

COUNTIF	Condition ke hisaab se count karta hai	=COUNTIF(A1:A10,">50")
SUMIF	Condition ke hisaab se sum karta hai	=SUMIF(A1:A10,"Delhi",B1:B10)
IF	Condition check karke result deta hai	=IF(A1>50,"Pass","Fail")
VLOOKUP	Vertical table me value dhoondhta hai	=VLOOKUP(A2,D:F,2,FALSE)
HLOOKUP	Horizontal table me value dhoondhta hai	=HLOOKUP(A2,D1:H5,2,FALSE)
CONCATENATE / &	Do ya zyada text ko jodta hai	=A1&" "&B1
TRIM	Extra spaces hata deta hai	=TRIM(A1)
TODAY()	Aaj ki date deta hai	=TODAY()
ROUND	Number ko round karta hai	=ROUND(A1,2)

4. Important Keyboard Shortcuts

Shortcut	Kaam
Ctrl + C / Ctrl + V	Copy / Paste
Ctrl + X	Cut
Ctrl + Z / Ctrl + Y	Undo / Redo
Ctrl + S	Save
Ctrl + F / Ctrl + H	Find / Replace
Ctrl + Arrow Key	Data ke last cell tak jump karna
Ctrl + Space	Poora column select karna
Shift + Space	Poori row select karna
Ctrl + 1	Format Cells dialog kholna
Ctrl + Shift + L	Filter on/off karna
Alt + =	AutoSum lagana
F2	Cell edit mode me jana
Ctrl + Page Up/Down	Ek sheet se doosri sheet me jana
Ctrl + ; (semicolon)	Aaj ki date insert karna

5. Common Interview Questions & Answers

Q1. VLOOKUP kya hota hai aur kab use hota hai?

VLOOKUP ek table me kisi value ko vertically (column-wise) search karke uske saamne wala data laane ke liye use hota hai. Data entry me alag-alag sheets se matching records nikalne me kaam aata hai.

Q2. Sorting aur Filtering me kya farak hai?

Sorting data ko ek order (A-Z, Z-A, ya numeric) me arrange karti hai, jabki Filtering sirf specific condition wale rows ko dikhati hai aur baaki hide kar deti hai — data delete nahi hota.

Q3. Freeze Panes ka use kya hai?

Jab bada data hota hai aur scroll karte waqt header row/column dikhna chahiye, tab Freeze Panes use karte hain taaki headers fix rahein.

Q4. Data Validation kyun important hai data entry job me?

Data Validation galat entries hone se rokta hai — jaise dropdown list se hi value select karwana, ya sirf number/date allow karna. Isse data accuracy banti hai.

Q5. Absolute aur Relative cell reference me kya farak hai?

Relative reference (A1) copy karne par change ho jata hai. Absolute reference (\$A\$1) fix rehta hai, chahe formula kahin bhi copy karein — \$ sign lagane se.

Q6. Duplicate values kaise remove karte hain?

Data tab me 'Remove Duplicates' option hota hai — data select karke us par click karne se duplicate rows apne aap hat jaate hain.

Q7. Aap large data entry me accuracy kaise maintain karte hain?

Data Validation, double-checking, Ctrl+F se verify karna, aur formulas (jaise COUNTIF) se cross-check karke accuracy maintain karta/karti hoon. Typing speed ke saath focus bhi zaroori hai.

6. Interview Tips

- Apni typing speed bata sakein toh zaroor mention karein (WPM aur accuracy %).
- Practical demo ke liye ready rahein — interviewer live Excel kholke kuch karne ko keh sakta hai.
- Confidently basic formulas (SUM, IF, VLOOKUP) practically bata paayein, sirf yaad na karein.
- Apne pichle kaam/project ka example ready rakhein jahan Excel use kiya ho.
